Any PKCS#11 compliant middleware

Supported Card Printers

Datocard
IXLA

Supported Certificate Authorities

Microsoft Windows Active Directory Certificate Services (KeyFactor) EJBCA (Community and Enterprise editions)
Ascertia ADSS
and, any SOAP or REST compliant CA

Standards & Interfaces

PKCS#7, 10, 11, 12
RSA, ECC, and AES
TLS, SOAP, and REST
XML / CSV, CRMF, and CMP

Supported Directory Services

Microsoft Windows Active Directory
and any LDAP v2/v3 compliant directory service

Managing Electronic Identities

Trust is the foundation for every organization. Everyone and everything establish trust by using their electronic identities (eIDs), like people connecting to their work environments, access servers, remotely access cars, home appliances, industrial equipment, and critical infrastructure. With this growing use of eIDs comes the challenge to remain in control. BlueX is specifically designed to make managing eIDs easy by providing a secure, stable, and scalable solution, enhancing governance, simplifying compliance, and lowering cost of eID life cycle management.

Tailored fit standardized customization

Not all organizations are created equal. Differences in industry, size, speed, and processes pose challenges for every organization trying to effectively manage their eIDs while remaining compliant with the ever-increasing complexity of information security governance and compliance. BlueX helps by seamlessly integrating into any organization, because it easily adapts to changes in policies by utilizing standardized customization tailored fit to the organization.

Trustworthy System

The high stability and minimal maintenance of BlueX will provide the foundation your organization needs to stay in control, easily adapt to, and remain compliant with the ever-increasing demands of digital security. BlueX is audited as a Trustworthy System according to CEN/TS 419261:2015.
